KEY FEATURES:

• Interchangeable couplings and manifolds- One tool can be adapted to a wide range of pressures and flows, saving the cost of purchasing multiple tools.

• External speed control- If you need to change the speed of rotation while on the job for precise material removal, it is easy to adjust without opening the tool or removing it from the hose.

• Easy access high pressure seals and external grease fittings- Reduced downtime for regular maintenance.

• Field repairable- No need to send to factory means reduced downtime and no freight fees.
WARNING AND SAFETY INSTRUCTIONS

⚠️ DANGER ⚠️

BOTH THE TR-130 AND TR-200 MODELS OF TORUS CONTAIN SEVERAL HIGH-ENERGY, RARE-EARTH MAGNETS THAT PRODUCE A MAGNETIC FIELD IN EXCESS OF 10 GAUSS. PERSONS WITH A PACEMAKER OR OTHER ELECTRONIC MEDICAL DEVICE MUST USE EXTREME CAUTION WHEN HANDLING, OR IN CLOSE PROXIMITY TO THE TORUS. IT IS RECOMMENDED THAT A MINIMUM DISTANCE OF 6 INCHES (152MM) BE MAINTAINED AT ALL TIMES BETWEEN THE TORUS AND ANY ELECTRONIC MEDICAL DEVICES.

⚠️ WARNING ⚠️

Operations with this equipment can be potentially hazardous. Caution must be exercised prior to and during machine and water jet tool use. Please read and follow all of these instructions, in addition to the guidelines in the WJTA Recommended Practices handbook, available online at www.wjeta.org. Deviating from safety instructions and recommended practices can lead to severe injury and/or death.

- Do not exceed the maximum operating pressure specified for any component in a system. The immediate work area must be marked off to keep out untrained persons.
- The Dump Valve is the most important safety device. Each operator must have and be able to use their own Dump Valves to shut down the water pressure immediately if necessary.
- Inspect the equipment and nozzles for visible signs of deterioration, damage, and improper assembly. Do not operate until repaired. Make sure all threaded connections are tight and free of leaks.
- All operators and persons in close proximity must wear personal protective equipment, including approved protection for body, hands, feet, face, ears, eyes, and air passages. Please refer to the WJTA Recommended Practices, Section 6.
- Water pressure greater than 20,000 psi (1379 bar) can reach 200°F (93°C) and can scald or burn the operator. Always use face shields, water jet resistant armor, and gloves to protect the operator from being burned or cut.
- The use of gloves when handling the tool after operation is recommended as the body at the pulling ring end may reach temperature of up to 160°F.
- Inspect the high pressure hose for damage. Use ONLY hoses intended for waterblast applications and rated for the maximum operating pressure on the job. The high pressure hose should be as large as possible to minimize pressure loss through the hose.
DESCRIPTION OF EQUIPMENT AND INTENDED USE (TR-130):

The Torus TR-130 3D Tool is designed for cleaning tanks, vessels, autoclaves, ducts and reactor interiors. The tool is capable of working pressures up to 22,000 psi (1500 bar) and flow rates of 10 to 80 gpm. The wide range of flow rates is accommodated by the use of four different manifolds: High Flow (R30), Medium Flow (R50), Low Flow (R90) and Extra Low Flow (R150). A maintenance-free magnetic brake is used to control rotation speed. Note that rotation speed may increase as the tool warms up to operating temperature. The complete Torus cleaning cycle varies from about 4 to 30 minutes of operating time depending on rotation speed, which is determined by pressure, flow rate, nozzle diameter, manifold choice and brake setting. A complete cleaning cycle is 92 revolutions of the body. The HP manifold revolves 2.36 times for each body revolution. When used in large vessels, extension arms up to 36 inches long can be used to reduce the jet standoff distance. The Torus can be hung from the high pressure water hose or by the optional pulling ring available for the tool. It is recommended to blow out all internal water passages (nozzles, weep holes, inlet) with compressed air after each use.
TORUS TR-130 OPERATION

OPERATION:
1. Before use, confirm that the installed manifold is the one specified for the operating pressure and flow rate. Failure to use the correct manifold will result in an over-speed condition causing permanent component damage, or a condition in which the tool rotates very slowly or not at all.
2. The MANIFOLD AND NOZZLE SELECTION chart below shows the correct manifold to use for various pressure and flow combinations. Make absolutely certain that the two nozzles being used are of equal size and in good condition, otherwise the Torus may rotate erratically, too fast, or not at all.
3. To use the chart, first select the operating pressure row from the left. Move to the right across the table until you read the flow closest to actual. Located directly under the flow rate is the appropriate manifold type, and located at the top of this column is the appropriate nozzle size. If you know the pressure and nozzle size, select the operating pressure row to the left, and read across the nozzle sizes in the top boxes until you get to the nearest nozzle size. The box where these two intersect will give the appropriate flow rate and manifold type.

THIS TABLE SHOWS MANIFOLD AND NOZZLE SIZE SELECTION GUIDELINES FOR COMMON JETTING SCENARIOS AND DOES NOT TAKE INTO ACCOUNT HOSE SIZE.
For the most accurate manifold and nozzle selection, use the StoneAge Jetting App:
http://jetting.stoneagetools.com

TR130 240-RXX-X MANIFOLD TYPES
There are four manifolds for the Torus; select the proper version for the operating conditions. Different arm lengths are also available.
INLET ADAPTERS:
The inlet adapters are all female-female couplings. One end is an O-ring face seal that seals to the inlet shaft. The other end is available in 3/4” NPT, 1” NPT, 3/4” medium pressure or 1” medium pressure.

SPEED ADJUSTMENT:
The rotation speed of the Torus may be adjusted using the speed adjustment shaft located at the opposite end from the inlet. The shaft may be set at any location between slow and fast. Any suitable tool may be used to adjust the speed by inserting the tool through the access slot on the housing and into the hole in the shaft. To change from slow to fast, turn the speed adjustment shaft approximately 50° to the left. Marks are engraved on the outside of the body to indicate slow and fast settings. Changing the speed from slow to fast will increase speed by approximately three times (i.e. slow 10 rpm; fast 30 rpm). The rotational speed depends on the torque produced by the operating pressure, flow, manifold version and brake setting. The average operating speed range of the cross-shaft is approximately 8-16 rpm on slow and approximately 25-50 rpm on fast.

NOTICE
Note: It is not necessary to remove the optional Pulling Ring Assembly to access the Speed Adjustment Knob.

Coupling Options
TR 230-P12 = 3/4” NPT
TR 230-P16 = 1” NPT
TR 230-MP12 = 3/4” Medium Pressure
TR 230-MP16 = 1” Medium Pressure
TR 230-M24 x 1.5 = 24mm
TR130 408-SS CAGE INSTALLATION:

Note that the short 2” nipples must be installed when using the Torus in the cage.

Insure that the end plate of the cage is installed as shown over the Pulling Ring Housing with about a 1/8” gap just behind the pulling bail; otherwise the Torus will not rotate correctly during operation.

Application of Blue Loctite 242 (StoneAge part number GP 180) to the pulling ring bolt prior to installation. Torque bolt to 50-60 ft-lbs.

Reference (2) GS 331-04-24 (Socket Head Cap Screw 5/16-24 UNF x 1.0 Long)

It may be necessary to remove the free half of the Clamp Collar on the cage to insert the Torus.

HC 090 PULLING RING INSTALLATION:

Apply Blue Loctite® 242 (StoneAge part number GP 180) to the pulling ring bolt prior to installation. Torque bolt to 50-60 ft-lbs.
### TORUS TR-130 MAINTENANCE SCHEDULE

<table>
<thead>
<tr>
<th>Maintenance Item</th>
<th>Frequency</th>
<th>Maintenance Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Pressure Seal (See Replacement instructions in this manual)</td>
<td>When water is leaking out of the weep holes closest to the inlet</td>
<td>The Torus has two high pressure seals, one in the inlet shaft, and one in the cross shaft. These seals are identical; they may leak water at low pressure (under 1000 psi) and will leak water continuously at operating pressure during failure. If water is leaking out of the weep holes closest to the inlet, the inlet seal is damaged. If the water is leaking out of the weep holes furthest from the inlet, the cross-shaft seal is damaged and must be replaced.</td>
</tr>
<tr>
<td>Lubricant and Storage</td>
<td>Every 100 hours of operation</td>
<td>It is recommended to grease the tool every 100 hours of operation. Any multi-purpose NLGI 2 grease is acceptable. There are five grease fittings located on the outside of the body. No damage will result from over-greasing the tool but the operator will likely see any extra grease leaking out around the shaft seals under operation. It is also recommended to blow out all internal water passages (nozzles, weep holes, inlet) with compressed air after each use to maximize the life of internal components.</td>
</tr>
<tr>
<td>Magnetic Brake</td>
<td>When necessary</td>
<td>The magnetic brake requires no lubrication or maintenance. If a problem is suspected with the magnetic brake assembly, it should be sent to a certified StoneAge repair center for service or replacement.</td>
</tr>
<tr>
<td>Threaded high pressure connections</td>
<td>Before and/or After each use</td>
<td>To avoid galling, for pipe thread connections use Parker Thread Mate thread sealant (StoneAge part number GP047) and fluorocarbon tape. For all other threaded high pressure connections use anti-seize lubricant alone. StoneAge recommends Swagelok Blue Goop (StoneAge part number GP 043).</td>
</tr>
<tr>
<td>Threaded fasteners</td>
<td>When necessary</td>
<td>It is VERY IMPORTANT that all threaded fasteners be reassembled per the following procedure:</td>
</tr>
</tbody>
</table>

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A) Fasteners labeled with a specific Blue Loctite (GP180) note</td>
<td>are to be reassembled and torque as noted.</td>
</tr>
<tr>
<td>B) All other fasteners are to be reassembled using Blue Goop</td>
<td>(GP 043) and torque if specified.</td>
</tr>
</tbody>
</table>

### WARNING

The use of gloves when handling the tool after operation is recommended as the body at the pulling ring end may reach temperatures of up to 160°F depending on operating conditions. Let the tool cool down before disassembling for any maintenance procedures.

TORUS TR-130 MAINTENANCE KITS

TORUS SERVICE
Product training and proper tools are required to service the Torus. If you are uncomfortable performing the service, bring the tool to your authorized dealer.
Take care throughout the entire procedure to keep the internals clean and free from grit, lint, and contamination. Failure to do so could result in premature failure after service.

LIST OF TOOLS:
- Pick
- Slot Screwdriver
- Manual Grease Gun
- Hex wrenches; 1/8", 1/4", 3/16", 5/16", 5/32", 2.5mm, and 3mm

LIST OF MATERIALS:
- Clean lint free rags or blue shop towels
- Swagelock Blue Goop Anti-Seize or Equivalent
- Mobil SHC PM 460 Synthetic Grease or equivalent

NOTICE
Do NOT use pneumatic or electric grease gun to lubricate the Torus Assemblies. High grease application rates may lead to grease inadvertently entering the brake assembly causing seal damage and/or rotation problems. StoneAge recommends a manual grease gun be used for lubrication.

TORUS TR-130 MAINTENANCE

The Torus has 2 high pressure seals. These seals may leak at tap pressure, but should seal at pressures above 1000 psi.

TO ACCESS THE SHAFT SEAL IN THE TR130 120 INLET ASSEMBLY:
1. Remove the (4) Sealing Socket Head Cap Screws holding the Inlet Assembly (TR130 120) to the Elbow Assembly. The Inlet Assembly may then be slid out of the Elbow Assembly to gain access to the Seal. The Seal is located in the end of the Inlet Shaft. No more disassembly is required.

TO ACCESS THE CROSS SHAFT SEAL:
1. Rotate the Half Manifolds as necessary to gain access to the (4) Sealing Socket Head Cap Screws that hold the Cross Shaft Assembly (TR130 170) to the Elbow Assembly and remove them. Lift the Cross Shaft Assembly out of the Main Elbow. The Seal is located in the end of the Cross Shaft. No more disassembly is required.

CAUTION
The use of gloves when handling the tool after operation is recommended as the body at the pulling ring end may reach temperatures of up to 160°F depending on operating conditions. Let the tool cool down before disassembling for any maintenance procedures.

TO MAINTAIN H.P. SEAT & SEAL:
1. Remove the Carbide Seat (MJ 011-C) and the H.P. Seal (HC 012-TO). Inspect the Seat for chips on edges. Replace if damaged. Inspect the related face of the Elbow Assembly for dings or pits. If damaged, it must be faced or replaced, otherwise the Seal will leak.

2. Apply grease to new H.P. Seal and install into bore. Place the Seat on the Seal with the flat side against the Seal. The chamfered side should face towards the Elbow Assembly.

(4) TR130 175 SEALING SCREWS
SHCS .312-18 X 1.00 SS
Apply Blue Goop to threads
Torque to 144 in-lbs (12 ft-lbs)

Apply Blue Goop to threads
Torque to 144 in-lbs (12 ft-lbs)
DESCRIPTION OF EQUIPMENT AND INTENDED USE (TR-200):

The Torus TR-200 3D Tool is designed for cleaning tanks, vessels, autoclaves, ducts and reactor interiors. The tool is capable of working pressures up to 15,000 psi (1035 bar) and flow rates of 50 to 220 gpm. The wide range of flow rates is accommodated by the use of seven different manifolds; each is engraved with its corresponding offset (i.e. R30). A maintenance-free magnetic brake is used to control rotation speed. Note that rotation speed may increase as the tool warms up to operating temperature. The complete Torus cleaning cycle varies from about 10 to 88 minutes of operating time depending on rotation speed, which is determined by pressure, flow rate, nozzle diameter, manifold choice and brake setting. A uniform jet pattern is achieved after 440 revolutions of the manifold shaft (136 revolutions of the body) and is recommended for most applications. The tool can continue to run, thus generating a finer jet pattern. A complete cleaning cycle is 1426 revolutions of the manifold shaft (441 revolutions of the body). The HP manifold shaft revolves 3.23 times for each body revolution. When used in large vessels, extension arms up to 36 inches long can be used to reduce the jet standoff distance. The Torus can be hung from the high pressure water hose or by the optional pulling ring available for the tool. It is recommended to blow out all internal water passages (nozzles, weep holes, inlet) with compressed air after each use.
OPERATION:
1. Before use, confirm that the installed manifold is one specified for the operating pressure and flow rate. Failure to use the correct manifold will result in an over-speed condition causing permanent component damage, or a condition in which the tool rotates very slowly or not at all.
2. The MANIFOLD AND NOZZLE SELECTION chart below shows the correct manifold to use for various pressure and flow combinations. Make absolutely certain that the two nozzles being used are of equal size and in good condition, otherwise the Torus may rotate erratically, too fast, or not at all.
3. To use the chart, first select the operating pressure row from the left. Move to the right across the table until you read the flow closest to actual. Located directly under the flow rate is the appropriate manifold type, and located at the top of this column is the appropriate nozzle size. If you know the pressure and nozzle size, select the operating pressure row to the left, and read across the nozzle sizes in the top boxes until you get to the nearest nozzle size. The box where these two intersect will give the appropriate flow rate and manifold type.

THIS TABLE SHOWS MANIFOLD AND NOZZLE SIZE SELECTION GUIDELINES FOR COMMON JETTING SCENARIOS AND DOES NOT TAKE INTO ACCOUNT HOSE SIZE.
For the most accurate manifold and nozzle selection, use the StoneAge Jetting App:
http://jetting.stoneagetools.com

TR200 240-RXX-X MANIFOLD
There are seven manifolds for the Torus; select the proper version for the operating conditions. Different arm lengths are also available.
INLET ADAPTERS:
The inlet adapters are all female-female couplings. One end is an O-ring face seal that seals to the inlet shaft. The other end is available in 1” NPT or 1” medium pressure.

SPEED ADJUSTMENT:
The rotation speed of the Torus may be adjusted using the speed adjustment shaft located at the opposite end from the inlet. The shaft may be set at any location between slow and fast. Any suitable tool may be used to adjust the speed by inserting the tool through the access slot on the housing and into the hole in the shaft. To change from slow to fast, turn the speed adjustment shaft approximately 50° to the left. Marks are engraved on the outside of the body to indicate slow and fast settings. Changing the speed from slow to fast will increase speed by approximately three times (i.e. slow 5 rpm; fast 30 rpm). The rotational speed depends on the torque produced by the operating pressure, flow, manifold version and brake setting. The average operating speed range of the cross-shaft is approximately 5-8 rpm on slow and approximately 30-45 rpm on fast.

NOTICE
Note: It is not necessary to remove the optional Pulling Ring Assembly to access the Speed Adjustment Knob.

<tr>
<th>Maintenance Item</th>
<th>Frequency</th>
<th>Maintenance Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Pressure Seal (See Replacement instructions in this manual)</td>
<td>When water is leaking out of the weep holes closest to the inlet</td>
<td>The Torus has two high pressure seals, one in the inlet shaft, and one in the cross shaft. These seals are identical; they may leak water at low pressure (under 1000 psi) and will leak water continuously at operating pressure during failure. If water is leaking out of the weep holes closest to the inlet, the inlet seal is damaged. If the water is leaking out of the weep holes furthest from the inlet, the cross-shaft seal is damaged and must be replaced.</td>
</tr>
<tr>
<td>Lubricant and Storage</td>
<td>Every 100 hours of operation</td>
<td>It is recommended to grease the tool every 100 hours of operation. Any multi-purpose NLGI 2 grease is acceptable. There are five grease fittings located on the outside of the body. No damage will result from over-greasing the tool but the operator will likely see any extra grease leaking out around the shaft seals under operation. It is also recommended to blow out all internal water passages (nozzles, weep holes, inlet) with compressed air after each use to maximize the life of internal components.</td>
</tr>
<tr>
<td>Magnetic Brake</td>
<td>When necessary</td>
<td>The magnetic brake requires no lubrication or maintenance. If a problem is suspected with the magnetic brake assembly, it should be sent to a certified StoneAge repair center for service or replacement.</td>
</tr>
<tr>
<td>Threaded high pressure connections</td>
<td>Before and/or After each use</td>
<td>To avoid galling, for pipe thread connections use Parker Thread Mate thread sealant (StoneAge part number GP047) and fluorocarbon tape. For all other threaded high pressure connections use anti-seize lubricant alone. StoneAge recommends Swagelok Blue Goop (StoneAge part number GP 043).</td>
</tr>
<tr>
<td>Threaded fasteners</td>
<td>When necessary</td>
<td>It is VERY IMPORTANT that all threaded fasteners be reassembled per the following procedure:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>A) Fasteners labeled with a specific Blue Loctite (GP180) note are to be reassembled and torque as noted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>B) All other fasteners are to be reassembled using Blue Goop (GP 043) and torque if specified.</td>
</tr>
</tbody>
</table>

**WARNING**

The use of gloves when handling the tool after operation is recommended as the body at the pulling ring end may reach temperatures of up to 160°F depending on operating conditions. Let the tool cool down before disassembling for any maintenance procedures.

TORUS TR-200 MAINTENANCE KITS

TORUS SERVICE
Product training and proper tools are required to service the Torus. If you are uncomfortable performing the service, bring the tool to your authorized dealer.

Take care throughout the entire procedure to keep the internals clean and free from grit, lint, and contamination. Failure to do so could result in premature failure after service.

LIST OF TOOLS:
- Pick
- Slot Screwdriver
- Manual Grease Gun
- Hex wrenches

LIST OF MATERIALS:
- Clean lint free rags or blue shop towels
- Swagelock Blue Goop Anti-Seize or Equivalent
- Mobil SHC PM 460 Synthetic Grease or equivalent

NOTICE
Do NOT use pneumatic or electric grease gun to lubricate the Torus Assemblies. High grease application rates may lead to grease inadvertently entering the brake assembly causing seal damage and/or rotation problems. StoneAge recommends a manual grease gun be used for lubrication.

TORUS TR-200 MAINTENANCE

TR-200 HIGH PRESSURE SEAL MAINTENANCE

The Torus has 2 high pressure seals. These seals may leak at tap pressure, but should seal at pressures above 1000 psi.

TO ACCESS THE SHAFT SEAL IN THE TR200 120 INLET ASSEMBLY:
1. Remove the (4) Sealing Socket Head Cap Screws holding the Inlet Assembly (TR200 120) to the Elbow Assembly. The Inlet Assembly may then be slid out of the Elbow Assembly to gain access to the Seal. The Seal is located in the end of the Inlet Shaft. No more disassembly is required.

TO ACCESS THE CROSS SHAFT SEAL:
1. Rotate the Half Manifolds as necessary to gain access to the (4) Sealing Socket Head Cap Screws that hold the Cross Shaft Assembly (TR200 170) to the Elbow Assembly and remove them. Lift the Cross Shaft Assembly out of the Main Elbow. The Seal is located in the end of the Cross Shaft. No more disassembly is required.

WARNING

The use of gloves when handling the tool after operation is recommended as the body at the pulling ring end may reach temperatures of up to 160°F depending on operating conditions. Let the tool cool down before disassembling for any maintenance procedures.

TR200 120 Inlet Assembly

TR200 170 Cross Shaft Assembly

*Grease the (5) Zerks on the Inlet and Cross Shaft Housings if necessary

TO MAINTAIN H.P. SEAT & SEAL:
1. Remove the Carbide Seat (SM 011) and the H.P. Seal (SM 012-O). Inspect the Seat for chips on edges. Replace if damaged. Inspect the related face of the Elbow Assembly for dings or pits. If damaged, it must be faced or replaced, otherwise the Seal will leak.

2. Apply grease to new H.P. Seal and install into bore. Place the Seat on the Seal with the flat side against the Seal. The chamfered side should face towards the Elbow Assembly.

1. Acceptance of Terms and Conditions. Receipt of these Terms and Conditions of Sale ("Terms and Conditions") shall operate as the acceptance by StoneAge, Inc. ("Seller") of the order submitted by the purchaser ("Buyer"). Such acceptance is made expressly conditional on assent by Buyer to these Terms and Conditions. Such assent shall be deemed to have been given unless written notice of objection to any of these Terms and Conditions (including inconsistencies between Buyer’s purchase order and this acceptance) is given by Buyer to Seller promptly on receipt hereof. Seller desires to provide Buyer with prompt and efficient service. However, to individually negotiate the terms of each sales contract would substantially impair Seller’s ability to provide such service. Accordingly, the product(s) furnished by Seller are sold only according to the terms and conditions stated herein and with the terms and conditions stated in any effective StoneAge Dealer Agreement or StoneAge Reseller Agreement, if applicable. Notwithstanding any terms and conditions on Buyer’s order, Seller’s performance of any contract is expressly made conditional on Buyer’s agreement to these Terms and Conditions unless otherwise specifically agreed to in writing by Seller. In the absence of such agreement, commencement of performance, shipment and/or delivery shall be for Buyer’s convenience only and shall not be deemed or construed to be an acceptance of Buyer’s terms and conditions.

2. Payment/Prices. Unless other arrangements have been made in writing between Seller and Buyer, payment for the product(s) shall be made upon receipt of invoice. The prices shown on the face hereof are those currently in effect. Prices invoiced shall be per pricelist in effect at the time of shipment. Prices are subject to increase for inclusion of any and all taxes which are applicable and which arise from the sale, delivery or use of the product(s), and the collection of which Seller is or may be responsible to provide to any governmental authority, unless acceptable exemption certificates are provided by Buyer in accordance with applicable law. Buyer shall pay all charges for transportation and delivery and all excise, order, occupation, use or similar taxes, duties, levies, charges or surcharges applicable to the product(s) being purchased, whether now in effect or hereafter imposed by any governmental authority, foreign or domestic.

3. Warranty. SELLER MAKES NO WARRANTIES OR REPRESENTATIONS AS TO THE PERFORMANCE OF ANY PRODUCT EXCEPT AS SET FORTH IN THE STONEAGE LIMITED WARRANTY PROVIDED WITH THE PRODUCT.

4. Delivery. Seller is not obligated to make delivery by a specified date, but will always use its best efforts to make delivery within the time requested. The proposed shipment date is an estimate. Seller will notify Buyer promptly of any material delay and will specify the revised delivery date as soon as practicable. UNDER NO CIRCUMSTANCES SHALL SELLER HAVE ANY LIABILITY WHATSOEVER FOR LOSS OF USE OR FOR ANY DIRECT OR CONSEQUENTIAL DAMAGES RESULTING FROM DELAY REGARDLESS OF THE REASON(S).

All product(s) will be shipped F.O.B. point of origin, unless specifically agreed otherwise, and Buyer shall pay all shipping costs and insurance costs from that point. Seller, in its sole discretion, will determine and arrange the means and manner of transportation of the product(s). Buyer shall bear all risk of loss commencing with the shipment or distribution of the product(s) from Seller’s warehouse. Order shortages or errors must be reported within fifteen (15) business days from receipt of shipment to secure adjustment. No product(s) may be returned without securing written approval from Seller.

5. Modification. These Terms and Conditions are intended by Seller and Buyer to constitute a final, complete and exclusive expression of agreement relating to the subject matter hereof and cannot be supplemented or amended without Seller’s prior written approval.

6. Omission. Seller’s waiver of any breach or Seller’s failure to enforce any of these Terms and Conditions at any time, shall not in any way affect, limit or waive Seller’s right thereafter to enforce and compel strict compliance with every term and condition hereof.

7. Severability. If any provision of these Terms and Conditions is held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the other portions hereof.
8. **Disputes.** Seller and Buyer shall attempt in good faith to promptly resolve any dispute arising under these Terms and Conditions by negotiations between representatives who have authority to settle the controversy. If unsuccessful, Seller and Buyer shall further attempt in good faith to settle the dispute by nonbinding third-party mediation, with fees and expenses of such mediation apportioned equally to each side. Any dispute not so resolved by negotiation or mediation may then be submitted to a court of competent jurisdiction in accordance with the terms hereof. These procedures are the exclusive procedures for the resolution of all such disputes between the Seller and Buyer.

9. **Governing Law.** All sales, agreements for sale, offers to sell, proposals, acknowledgments and contracts of sale, including, but not limited to, purchase orders accepted by Seller, shall be considered a contract under the laws of the State of Colorado and the rights and duties of all persons, and the construction and effect of all provisions hereof shall be governed by and construed according to the laws of such state.

10. **Jurisdiction and Venue.** Seller and Buyer agree that the state or federal courts located within the City and County of Denver, Colorado shall have sole and exclusive jurisdiction over any litigation concerning any dispute arising under these Terms and Conditions not otherwise resolved pursuant to Section 9 as well as any alleged defects of any Products or damages sustained as a result of such alleged defects. Seller and Buyer further agree that should any litigation be commenced in connection with such a dispute, it shall only be commenced in such courts. Seller and Buyer agree to the exclusive jurisdiction of such courts and neither will raise any objection to the jurisdiction and venue of such courts, including as a result of inconvenience.

11. **Attorney’s Fees.** If any litigation is commenced between Seller and Buyer, or their personal representatives, concerning any provision hereof, the party prevailing in the litigation shall be entitled, in addition to such other relief that is granted, to a reasonable sum as and for their attorneys’ fees and costs in such litigation or mediation.

STONEAGE TERMS AND WARRANTY
View StoneAge’s Terms and Warranty Conditions online.
http://www.StoneAgeTools.com/terms
This Limited Warranty
To be Subject to Service

1. TERMS AND CONDITIONS AND WARRANTY INFORMATION

Warranties set forth herein extend only to End-Users, meaning customers acquiring, or that have previously acquired, a product manufactured by StoneAge (“Product”) for their own use and not for resale, either directly from StoneAge Inc. (“StoneAge”) or from a StoneAge Authorized Dealer or Reseller (“Dealer”). No warranty of any kind or nature is made by StoneAge beyond those expressly stated herein.

2. LIMITED WARRANTY PERIOD. Subject to the limitations and conditions hereinafter set forth, StoneAge warrants its Product to be free from defects in workmanship and material for a period of one (1) year from the date of purchase by the End-User, provided that the end of the limited warranty period shall not be later than eighteen (18) months from the date of shipment of the Product to the Dealer or the End-User by StoneAge (“Limited Warranty Period”). All replacement parts which are furnished under this Limited Warranty and properly installed shall be warranted to the same extent as the original Product under this Limited Warranty if, and only if, the original parts were found to be defective within the original Limited Warranty Period covering the original Product. Replacement parts are warranted for the remainder of the original Limited Warranty Period. This Limited Warranty does not cover any component part of any Product not manufactured by StoneAge. Any such component part is subject exclusively to the component manufacturer’s warranty terms and conditions.

3. LIMITED WARRANTY COVERAGE. StoneAge’s sole obligation under this Limited Warranty shall be, at StoneAge’s option and upon StoneAge’s inspection, to repair, replace or issue a credit for any Product which is determined by StoneAge to be defective in material or workmanship. StoneAge reserves the right to examine the alleged defective Product to determine whether this Limited Warranty is applicable, and final determination of limited warranty coverage lies solely with StoneAge. No statement or recommendation made by a StoneAge representative, Dealer or agent to End-User shall constitute a warranty by StoneAge or a waiver or modification to any of the provisions hereof or create any liability for StoneAge.

4. WARRANTY EXCLUSIONS. This Limited Warranty does not cover, and StoneAge shall not be responsible for the following, or damage caused by the following:

   1. any Product that has been altered or modified in any way not approved by StoneAge in advance in writing;
   2. any Product that has been operated under more severe conditions or beyond the rated capacity specified for that Product;
   3. depreciation or damage caused by normal wear and tear, failure to follow operation or installation instructions, misuse, negligence or lack of proper protection during storage;
   4. exposure to fire, moisture, water intrusion, electrical stress, insects, explosions, extraordinary weather and/or environmental conditions including, but not limited to, lightning, natural disasters, storms, windstorms, hail, earthquakes, acts of God or any other force majeure event;
   5. damage to any Product caused by any attempt to repair, replace, or service the Product by persons other than StoneAge authorized service representatives;
   6. costs of normal maintenance parts and services;
   7. damage sustained during unloading, shipment or transit of the Product;
   8. failure to perform the recommended periodic maintenance procedures listed in the Operator’s Manual accompanying the Product.

5. REQUIRED WARRANTY PROCEDURES. To be eligible for warranty service, the End-User must:

   1. report the Product defect to the entity where the Product was purchased (i.e. StoneAge or the Dealer) within the Limited Warranty Period specified in this Limited Warranty;
   2. submit the original invoice to establish ownership and date of purchase; and
   3. make the Product available to a StoneAge authorized service representative for inspection to determine eligibility for coverage under this Limited Warranty. This Limited Warranty shall not extend to any person or entity who fails to provide proof of original purchase from StoneAge or a Dealer. No Product may be returned for credit or adjustment without prior written permission from StoneAge.
6. DISCLAIMER OF IMPLIED WARRANTIES AND OTHER REMEDIES. EXCEPT AS EXPRESSLY STATED HEREIN (AND TO THE FULLEST EXTENT ALLOWED UNDER APPLICABLE LAW), STONEAGE HEREBY DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, AND ANY AND ALL WARRANTIES, REPRESENTATIONS OR PROMISES AS TO THE QUALITY, PERFORMANCE OR FREEDOM FROM DEFECT OF THE PRODUCT COVERED BY THIS LIMITED WARRANTY. STONEAGE FURTHER DISCLAIMS ALL IMPLIED INDEMNITIES.

7. LIMITATION OF LIABILITY. End-User specifically acknowledges that the Product may be operated at high speeds and/or pressures, and that as such it may be inherently dangerous if not used correctly. End-User shall familiarize itself with all operation materials provided by StoneAge and shall at all times use and require its agents, employees and contractors to use all necessary and appropriate safety devices, guards and proper safe operating procedures. In no event shall StoneAge be responsible for any injuries to persons or property caused directly or indirectly by the operation of the Product if End-User or any agent, employee, or contractor of End-User: (1) fails to use all necessary and appropriate safety devices, guards and proper safe operating procedures; (2) fails to maintain in good working order such safety devices and guards; (3) alters or modifies the Product in any way not approved by StoneAge in advance in writing; (4) allows the Product to be operated under more severe conditions or beyond the rated capacity specified for the Product; or (5) otherwise negligently operates the Product. End-User shall indemnify and hold StoneAge harmless from any and all liability or obligation incurred by or against StoneAge, including costs and attorneys’ fees, to or by any person so injured.

TO THE FULL EXTENT ALLOWED BY APPLICABLE LAW, STONEAGE SHALL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR PUNITIVE DAMAGES (INCLUDING WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF GOODWILL, DIMINUITION OF VALUE, WORK STOPPAGE, INTERRUPTION OF BUSINESS, RENTAL OF SUBSTITUTE PRODUCT, OR OTHER COMMERCIAL LOSS EVEN TO THE EXTENT SUCH DAMAGES WOULD CONSTITUTE DIRECT DAMAGES), WITH RESPECT TO THE COVERED STONEAGE PRODUCT, OR OTHERWISE IN CONNECTION WITH THIS LIMITED WARRANTY, REGARDLESS OF WHETHER STONEAGE HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

IT IS UNDERSTOOD THAT STONEAGE’S LIABILITY, WHETHER IN CONTRACT, IN TORT, UNDER ANY WARRANTY, IN NEGLIGENCE, OR OTHERWISE SHALL NOT EXCEED THE AMOUNT OF THE PURCHASE PRICE PAID BY THE END-USER FOR THE PRODUCT. STONEAGE’S MAXIMUM LIABILITY SHALL NOT EXCEED, AND END-USER’S REMEDY IS LIMITED TO EITHER (1) REPAIR OR REPLACEMENT OF THE DEFECTIVE WORKMANSHIP OR MATERIAL OR, AT STONEAGE’S OPTION, (2) REFUND OF THE PURCHASE PRICE, OR (3) ISSUANCE OF A CREDIT FOR THE PURCHASE PRICE, AND SUCH REMEDIES SHALL BE END-USER’S ENTIRE AND EXCLUSIVE REMEDY.

YOU, THE END-USER, UNDERSTAND AND EXPRESSLY AGREE THAT THE FOREGOING LIMITATIONS ON LIABILITY ARE PART OF THE CONSIDERATION IN THE PRICE OF THE STONEAGE PRODUCT YOU PURCHASED.

Some jurisdictions do not allow the limitation or exclusion of liability for certain damages, so the above limitations and exclusions may not apply to you. This Limited Warranty gives you specific legal rights, and you may also have other rights which vary from jurisdiction to jurisdiction. If any provisions of this Limited Warranty is held to be invalid or unenforceable, such invalidity or unenforceability shall not affect the validity or enforceability of the other portions hereof.
